

## *Vice-Principal's Message...*

Dear parents, teachers, and students, I extend to you all a very warm welcome to the website of A.G. Patil Polytechnic Institute, Solapur (Maharashtra). I hope that this initiation to website will assist in enhancing the Polytechnic culture furthering the institution's growth and evolution, enabling it to interface with the networked world for efficiency and effectiveness.

We are committed to impart quality and value based education, leading to employment and meeting the current global requirements.

The purpose of polytechnic education is to develop a skilled technocrat. Last decade has seen India as a supplier to the world and not just remained as a consumer. This has happened because of rapid industrialization in the country which is based on standards like industry 4.0 growths in infrastructure and fast urbanization.

This Paradigm shift has increased the expectations from a diploma engineer in terms of skills and knowledge. There are three career options open to a diploma holder, seek for an employment as a skill technician, become an entrepreneur or go for higher education that is graduation in the respective domain.

It is my pleasure to take charge as Vice Principal of polytechnic wing in such developing period.

It has become a trend that a diploma pass out prefers to go for higher education that is graduation in the same or different domain. Never the less any engineer graduate with diploma from A.G. Patil Polytechnic will have an edge over others in terms of skill set and problem solving and knowledge.

Wishing you all the best.....

**Mr. S. K. Mohite**  
(Vice-Principal)
